DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-22, drawn to product and process of forming a non-contact medium with a booster unit and IC module, classified in class 235, subclass 492.
 - II. Claims 23-24, drawn to a system and method for checking a signal received from a non-contact medium with an IC module, classified in class 235, subclass 451.
 - III. Claims 25-33, drawn to a system for a non-contact medium to communicate with an external and/or auxiliary apparatus using multiple carrier frequencies, classified in class 235, subclass 375.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Groups I and II are related as combination and subcombination.
3. Inventions of Groups I and III are related as combination and subcombination.
4. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination is not essential to the combination. The subcombination Group I has separate utility from Groups II and III, such as a non-contact medium to communicate with a personnel identification reader, not necessarily requiring use

Art Unit: 2876

with a checking system (as in Group II) or use with an apparatus with multiple carrier frequencies (as in Group III).

5. Inventions Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group II has separate utility such as such as a non-contact medium communicating with a checking system for ensuring that a “tagged” product in a retail setting is not defective, not necessarily requiring a system communicating with multiple frequencies (as in Group III). See MPEP § 806.05(d).

6. Because these inventions are distinct for the reasons given above and the search required for the individual Group I, II, or III are not required for neither of the other groups, restriction for examination purposes as indicated is proper.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
